

## **ABSTRACT**

### **SELF CHECKOUT SYSTEM**

In today's fast paced world no one wants to wait for a long. While in the offline shopping culture the most time consuming processes is billing and checkouts. Where if a person buys a single or multiple products, he or she has to wait for hours in a queue and it is mandatory to pass all the intermediate processes before checkouts. So with an intention to overcome such time consuming problem we have developed an application which would skip all the intermediate steps from adding cart to checkouts and provide fast services to customers. This app helps customers to generate bill by their own and no need to wait in a queue for billing and checkouts. This app also supports online payments like e-wallets, credit/debit cards, net-banking etc. It cut downs the problem of change (small currencies). These functionalities of application help customers to save their valuable time.
